## **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Sterling Chandler on 1/11/2005.

The application has been amended as follows:

The title is replaced with, "High Pressure Fuel Supply Pump with an Intake Valve Member and a Discharge Valve Member Aligned Along a Plunger Axis."

In claim 6, line 7, the phrase "between the plunger and the valve member," is replaced with - - between the plunger and the valve member at a through-hole having a step, - -.

In claim 6, line 8, the phrase "being provided with," is replaced with - - being in contact with said step and provided with - -.

Application/Control Number: 10/724,607

Art Unit: 3746

## Reasons for Allowance

Page 3

2. The following is an examiner's statement of reasons for allowance: the prior art neither discloses nor makes obvious the combination set forth in the claims by not disclosing fuel supply pump comprising a housing with a through-hole having a step, a plunger slidably accommodated and reciprocatingly movable in the through-hole, an intake valve member in contact with the step so that a pump chamber is formed between the plunger and the intake valve member, a discharge valve member positioned in the through-hole on an axially opposite side of the plunger and in contact with the intake valve member, and in particular where the both the discharge valve member and the intake valve member are pushed against the step so that the intake valve member and the discharge valve member are rigidly fixed in the through-hole.

Alaze et al. (U.S. 6,283,724 B1) is hereby cited for teaching a fuel pump in Figures 1 and 2 which comprises a discharge valve member and an intake valve member in a through-hole and axially aligned, however the device does not teach the intake valve member in contact with the step and in contact with the discharge valve member, and that both the discharge valve member and the intake valve member are pushed against the step so that the intake valve member and the discharge valve member are rigidly fixed in the through-hole

Schuller et al. (U.S. 5,123,819), Eckstein et al. (U.S. 5,232,273), Fuchida (U.S. 5,320,498), Schuller et al. (U.S. 6,079,961), and Sinnl (U.S. 6,126,418), teach various applications of fuel pumps with inlet and discharge valve members analogous to the claimed invention. None teach the claimed structure.

Application/Control Number: 10/724,607 Page 4

Art Unit: 3746

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 3746

## **Contact Information**

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Emmanuel Sayoc whose telephone number is (571) 272 4832. The examiner can normally be reached on M-F 8-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy S. Thorpe can be reached on (571) 272-4444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
